Sunset: 8:24 PM CDT

What this report is (and isn't): These figures come from 29 years of actual recorded weather at the nearest quality climate station (LITTLE ROCK AP ADAMS FIELD), pooled across a ± 3 -day window around each date to build a stable sample. This is a *climate outlook*, not a forecast — it tells you what's typical and how much risk each date has historically carried, not what the weather will specifically do. As your date gets closer, get the real forecast update (see below).

Want the actual forecast as your date approaches? Just Right Weather sends a real forecast update using live NWS model data — justrightweather.com/wedding
